

HIGH STANDARDS SCAFFOLDING ARE PITCH-PERFECT

Faced with providing two temporary roofs over a steeply pitched roof, High Standards Scaffolding of Hemel Hempstead found the perfect solution: Their inhouse design team integrated the company's own stock of tube and fittings to support the roof with two Haki temporary roofs supplied by UK System Scaffold Hire.

High Standards Scaffolding's design featured one Haki temporary roof with 23 x 2.5 metre bays to create a roof that was 60.3 metres long with a span of 15.6 metres and a 22° pitch, while the second roof was 75.6 metres long with a span of 15.6 metres and a 22° pitch.

Karl Yarham, High Standards Scaffolding's MD commented that the Haki temporary roof delivered on all its promises – saving time and money and providing the most weatherproof

system available: "Up to five times faster to install than traditional structures, Haki has fewer components compared to other systems and its lightweight design delivered real advantages throughout the project".

Karl was equally complimentary about the service provided by UKSSH: "In addition to scaffolding services and scaffolding design, High Standards Scaffolding also offers a hire and sales service, so we fully understand the importance of providing a service that integrates seamlessly with a clients operational needs: UKSSH provided first rate product knowledge and support and a totally reliable logistics service".
